

REMONDIS QR – In brief

Your mercury containing waste is our challenge. Yes, we can!

REMONDIS QR commenced its operations in Germany in 1989 and is the specialist for safe treatment and disposal of waste containing mercury within the worldwide operating REMONDIS-Group.

What moves us is to offer to our customers the highest level of security and reliability throughout the whole process.

REMONDIS QR is a certified and audited waste management partner for customers from oil and gas industry as well as for chemical industry and non-ferrous mining companies.

With our strict health, safety and environmental policies and our long standing expertise in mercury waste management, REMONDIS QR provides waste treatment solutions according to the current European Mercury Regulation and the Minamata Convention.

At our plants in Dorsten and Lübeck we offer different types and technologies of treatment process in order to deal with all types of waste containing mercury: Yes, we do!
